Valium (Diazepam) 10mg – Overview

Valium 10mg contains Diazepam, a well-known benzodiazepine medication used to treat anxiety and related conditions. It has been prescribed worldwide for decades due to its calming, muscle-relaxing, and sedative effects.

What is Valium?

Valium is a prescription medication belonging to the benzodiazepine class.

It is commonly used for:

- Anxiety disorders
- Muscle spasms
- Seizure management
- Alcohol withdrawal symptoms
- Valium works on the central nervous system to promote relaxation.

How Valium Works

Diazepam enhances the activity of GABA (gamma-aminobutyric acid), a neurotransmitter that slows brain activity.

This action helps:

- **Reduce excessive nervous system activity**
- **Calm the mind**
- **Relax muscles**
- **Control seizures**
