RELIVEXUSA

Tramadol 100 mg

- Tramadol is a prescription pain-relief medication
- Belongs to the opioid analgesic class
- Used for managing moderate to moderately severe pain
- Works by changing how the brain perceives pain

HOW TRAMADOL WORKS

Mechanism of Action

- Acts on opioid receptors in the central nervous system
- Inhibits reuptake of serotonin and norepinephrine
- Helps reduce pain signals sent to the brain
- Provides both pain relief and mild calming effects

USES OF TRAMADOL 100 MG

- Relief of moderate to severe pain
- Post-surgical pain management
- Pain after injury or trauma
- Chronic pain conditions (as prescribed by a doctor)
- Pain not relieved by non-opioid medications

DOSAGE & ADMINISTRATION

- Taken orally with or without food
- Dosage depends on pain severity and medical condition
- Should be taken exactly as prescribed

- Do not increase dose without medical advice
- Avoid alcohol while using tramadol

COMPANY CREATIVE SERVICES
